

Using Public Partners Resources

Physical Infrastructure

What physical and human resources does your community have that could be used as part of a broadband network?

Things to consider:

This could include identified physical resources like public right of way access, any identified government owned internet infrastructure – particularly any dark fiber; vertical infrastructure (building towers, etc.).

Additional information:

The goal should be to seek to incorporate available physical resources as “contributions” public partners can make to bring affordable and reliable high-speed internet to communities.

What are the resources?

Market Power

Who are the potential major customers for the new network?

How could they be incorporated into the overall strategy?

Things to consider:

This could include government and closely aligned nonprofit organizations that either now or in the future could benefit from this new infrastructure.

Additional information:

The goal should seek to leverage the “value added” by incorporating public partners as users of any high-speed internet assets added to the community.

Who are the major users of this new infrastructure?

- 1.
- 2.
- 3.
- 4.
- 5.
